Eye-C and Eye-Q...helping people with Macular Degeneration and other low vision conditions

Many people with macular degeneration, diabetic retinopathy, glaucoma, cataracts, RP, and other low vision conditions who struggle with the fixed magnification and small lens area of an optical magnifying glass, can read and write more clearly and comfortably with the Eye-C and Eye-Q portable video magnifiers. Even if you use up to a 14x optical magnifier, the Eye-C's and Eye-Q's bright video screen, choice of Positive or Reverse images, and range of magnification will help you to read more easily and comfortably. Read the menu in a restaurant, labeling on prescription bottles, recipes in the kitchen, review mail order catalogs and the TV program listings. Take the Eye-C or Eye-Q with you anywhere ... read anything ... anytime.
