MANO is slim, small, and lightweight it fits in the palm of your hand

Shopping, reading a restaurant menu, and many other reading tasks when you're "on the go" are all possible with the MANO. You'll never be without your MANO, wherever you go. MANO is perhaps the most stylishly designed portable video magnifier available. It's so slim, small and lightweight, it fits in the palm of your hand. It's the ideal video magnifier to carry in your pocket or purse. MANO weighs less than 5-ounces and measures only 3.5" long by 2.9" wide.

Offering the low vision user 2x-20x continuous zoom magnification, MANO's 3.5" LCD display is the smallest magnifier with the widest range of magnification. Excellent text and background brightness and contrast produce a quality image.

MANO's built-in stand offers the user comfortable tilt angle viewing of the display screen, unlike most other portable video magnifiers that cannot tilt the screen. Its automatic picture correction technology provides a sharp and bright image despite the viewing angle. MANO can also be held directly above the reading text if the user prefers not to pull down the built-in stand.

The 3.5" bright LCD screen displays in full color, a high contrast B/W, the enhanced white letters on a black background, and three colored text and background images (green letters on a black background, yellow letters on a black background, and yellow letters on a blue background) so the low vision user can choose the most comfortable viewing display.

An image capture feature allows up to three different displays to be saved. Once captured, the user can even zoom in or out with the magnification button or change the display mode for better viewing.

The integrated lithium-ion battery runs up to 2 1/2 hours on a full charge. A 3-minute image sensor battery saver mode is programmed into MANO to conserve the battery when the unit is not moved ... then, just move the unit and it's immediately restored to the active image. After 5 minutes of non-use, the unit will power off to conserve battery time. Just plug in the AC adapter to recharge the MANO.

MANO features one of the most convenient writing capabilities among portable video magnifier models. Its built-in stand provides a comfortable writing angle.
