

SenseView Pocket

3.4" OLED wide-screen Pocket Video Magnifier

- ▶ **3.4" wide-screen OLED screen**
- ▶ **1.5x - 10.5x (4 sizes)**
- ▶ **4 brightness adjustment levels**
- ▶ **Snapshot freeze image**
- ▶ **Easily accessible buttons**
- ▶ **Center located camera**
- ▶ **3-hour rechargeable lithium battery**

Introducing SenseView Pocket, the only OLED bright screen technology pocket size video magnifier. Its 3.4" Organic Light Emitting Diode (OLED) wide-screen, the only wide-screen pocket size video magnifier available, produces a brighter and sharper image than a LCD screen.

SenseView Pocket magnifies from 1.5x - 10.5x. Press the Size button to select one of four preset magnification levels or just hold the unit slightly above the reading material. Take it with you anywhere you go, as it operates for up to 3 hours of continuous use via its internal rechargeable lithium battery. Prop the unit on its two built-in legs to easily read a restaurant menu, daily mail, newspaper or magazine article, or leave the legs collapsed to view a prescription bottle, price tag, or grocery item.

View or enhance the image in full color, B/W or enhanced B/W, or Reverse (white letters on a black background) or enhanced Reverse image. Press the Brightness button to select among four brightness levels depending on the text and paper quality or the lighting conditions in your portable environment. Three LED light levels allow additional image enhancement.

SenseView Pocket is attractively designed, weighs only 5.3 ounces, and comes with a drawstring case. SenseView Pocket gives you the newest technology, with a great package of features, at a value price.
